

Comments on Academia-Industry Collaboration based on
the Bosch Experience in the PR2 Beta Program

Jan Becker

Bosch

Bosch Group

- Founded 1886, privately held (Robert Bosch Foundation and Bosch Family)
- ~300.000 employees, ~47b Euro revenue (2010)
- Divisions: Automotive, Industrial Technology, Consumer Goods, Building Technologies, Solar Technologies
- Largest Automotive Supplier worldwide

Bosch Corporate Research

- 1300 employees
- Offices in Germany, USA, Japan, China, Singapore, Russia

Bosch Research and Technology Center NA

→ Offices

- Palo Alto, CA
- Pittsburgh, PA
- Cambridge, MA

→ Topics

- HMI design, car infotainment, web technologies
- energy materials and technologies, complex simulations
- software engineering
- MEMS sensors, IC design, wireless solutions
- autonomous technologies/systems

Robotics

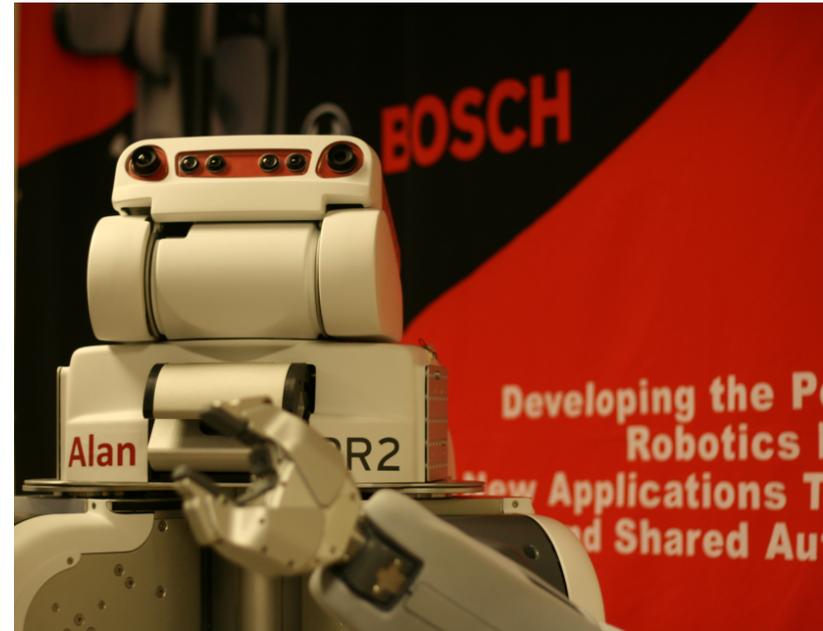

Research and Technology Center North America

BOSCH

PR2 Beta Program

- Participant in the Willow Garage's PR2 Beta Program
 - 10 top academic research institutes
 - Bosch is the only corporate participant
- Development and contribution to open source software
- Collaboration with Willow Garage and the PR2 community

A close-up photograph of the head of a white PR2 robot. The head features two large black camera eyes on the sides and a central sensor array with four smaller black lenses. The background is a blurred red and black banner with the word "BOSCH" in red.

Making robots cheaper, more capable, and safer

Bosch's contribution to the PR2 Beta Program

A photograph of the white PR2 robot's right arm and hand. The arm is extended forward, and the hand is open. The name "Alan" is printed in red on the side of the robot's body. The background is a blurred red banner with white text.

1 FIT = 1 Fehler / 10⁹ h

continuous system

How to bridge the gap?

→ Industrial Requirements

- Quality
- Reliability
- Reusability

→ Academia

- Current success measures for Academia
 - Productivity: total number of papers
 - Impact: citations of papers

How to bridge the gap?

- ROS / PR2 Beta Program Approach
 - Academia and industry in one program
 - Common basis is open source repository
 - Requirement to open source commitments
 - Request to open source code related to publications
 - Establishing standard for academia
 - Quantitative software metrics

- Results
 - Increased exchange of code
 - Interaction between sites
 - Repeatability of results
 - Reusability of algorithms through standardization

How to bridge the gap?

- What can be improved?
 - Quality
 - Reliability

- Additional Incentives
 - Qualitative software metrics

Summary

- Industry-academia collaboration
 - Potential gap in objectives
- Academic incentive is number of papers
 - Results may not repeatable, algorithms not reproducible
- Academia-industry-collaboration based on open source collaboration
 - Can help bridge the gap
